DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Ogawa et al. (US 6,455,877).

With regard to claims 1 and 3, Ogawa et al. disclose a group III-V light-emitting device (col. 6, line 23 to col. 24, line 51 and fig. 1) comprising:

- A GaN-based substrate 102 (col. 8, line 19);
- A semiconductor stacked-layer structure including a plurality of nitride-based semiconductor layers 103 to 110 grown on the GaN-based substrate 102 by MOCVD (col. 8, lines 23-28 and col. 7, lines 62-65);
- The GaN-based substrate having an interface region contacting the semiconductor stacked-layer structure and the interface region containing oxygen atoms (oxygen doped col. 8, line 3) at concentration n-type at least $3 \times 10^{18} \text{ cm}^{-3}$ (col. 4, line 46)

With regard to claim 2, Ogawa et al. disclose when the GaN-based substrate was made, GaCl was generated and would mixed by the impurity doping gas. Therefore, the GaN-based substrate inherently contains chlorine (col. 9, lines 5-15).

With regard to claim 4, Ogawa et al. disclose the plurality of nitride-based semiconductor layers included in the semiconductor stacked-layer structure include a layer 103 contacting the GaN-based substrate 102 (fig. 1), and the layer contacting the GaN-based substrate contains oxygen (oxygen doped col. 8, line 3).
